

Hi, I'm Agus

Data Scientist, Data Engineer and AI Engineer.

Applied AI lecturer and thesis advisor at ITBA. I've played basketball since I was 6.

About me

I enjoy understanding what is happening and why, what could happen next, and what we can change so that something different happens. To do that, I wear whichever hat the problem needs: data scientist, data engineer or AI engineer.

Experience

- **Lecturer in Applied AI for Business, ITBA** · March 2025 – present. I teach 48 students to use AI to work more efficiently: skills, context engineering, MCPs, testing, persistent memory and when automating is not worth it. I built a private tutor with the course theory so they can consult it whenever they want.
- **Final Project Advisor, ITBA** · August 2026 – present. I guide the team through their business case (Vera AI) and do the first review of its 5 deliverables.
- **Data Scientist, IQ4B** · January 2025 – May 2026. I designed dashboards and reports with clients in Power BI and Qlik Sense, with scheduled refreshes to keep the data up to date. I built a demand forecasting model for a retailer.

Projects

- **Sales lead triage agent.** A logistic regression model that helps marketing and sales prioritize budget and time, exposed through MCP, with a LangGraph agent that contacts the leads. It has guardrails, evals and 79 tests.
- **Credit scoring engine.** Estimates the expected loss of each loan by combining a default classifier with two regressions (exposure and severity). It has a REST API, a dashboard and an online deployment, and uses an LLM to explain each prediction, with guardrails that block made-up metrics.
- **Bayesian Marketing Mix Model.** How many sign-ups does each marketing channel bring, and where is money best invested? A Bayesian Marketing Mix Model answers that, validated with a lift test and closed with a budget optimization. The data is prepared in SQL with DuckDB and dbt, with quality tests.
- **RAG over the agents book.** Lets you ask questions about the book «30 Agents Every AI Engineer Must Build»: it answers citing the page so you can verify it, using sentence-transformers embeddings and a FAISS index. FastAPI backend, Next.js frontend.
- **ETL pipeline on Databricks.** A Medallion architecture with Delta Lake and Change Data Feed, with daily sales KPIs for the business.

You can find them in more detail in the **Proyectos** app on this desktop.

Skills

- **LLMs and agents:** LangGraph, MCP, Anthropic and OpenAI APIs, evals with golden sets, guardrails, context engineering, skill design.
- **Python:** pandas, NumPy, scikit-learn, PyTorch, pytest.
- **Machine learning and statistics:** classification, regression, scoring, calibration, inference, A/B testing, Bayesian modeling (PyMC).
- **Data:** SQL, DuckDB, dbt, PySpark, Databricks, Airflow.
- **Production and cloud:** FastAPI, Docker, AWS.
- **BI:** Power BI, Qlik Sense.

Education

- **Bachelor's in Analytics (Data Science)**, ITBA · 2021 – 2026.
- **Data Engineering with Databricks**, UTN.BA · in progress.
- **AWS AI Practitioner**, AWS Academy · September 2026.
- **Public speaking and communication**, Franco Pisso · June 2026.
